### The world of FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

### How the datastream is defined:

- version 1 byte, always 1
- type 1 byte, stuff like begin-request, abort-request, params, stdin-data, stdout-data, etc.
- request id 2 byte request identifier
- content length 2 byte length of bundled data
- $\blacksquare$  padding length 1 byte length of padding data
- the data (0–64k bytes)
- the padding (0-255 bytes)

### Programming support

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

### The world of FastCGI

- FastCGI with Apache httpd
- Comparisons between the contenders
- Configuration

Future

After all, nobody would want to reinvent *that* protocol.

 FastCGI protocol libraries are available for use with Perl, Python, Ruby, C, etc., often based on the C library from Open Market.

Code to the API to implement a FastCGI application. With some APIs, a properly coded FastCGI app will also work as plain CGI.

- PHP supports it transparently.
- Some frameworks support it transparently.

### Perl example, moving from CGI to FastCGI

Using FastCGI with Apache HTTP Server

## Web server support for FastCGI applications

Using FastCGI with Apache HTTP Server

Jeff Trawick

### The world of FastCGI

- FastCGI with Apache httpd
- Comparisons between the contenders
- Configuration
- Future

- Available for most web servers, including Apache httpd, IIS, Lighttpd, nginx, iPlanet, and others
- Typically implemented as a shared library (plug-in module) which can be loaded if the feature is desired

## Who would have thought

Using FastCGI with Apache HTTP Server

Jeff Trawick

### The world of FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

such an old and obvious extension to CGIs is still relevant a web lifetime later?

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQ@

# History

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

### The world of FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

The FastCGI protocol was originally developed in 1995–1996 for a web server from Open Market, perhaps in response to the NSAPI programming model which allowed for C language plug-ins for the Netscape (now iPlanet once again) web server.

http://www.fastcgi.com/devkit/doc/fcgi-spec.html

 One web server implementation of particular interest, also from Open Market: mod\_fastcgi 1.0 for Apache 1.0 in 1996

See the August 28, 1996 issue of Apache Week.

# What happened after that?

Using FastCGI with Apache HTTP Server

Jeff Trawick

The world of FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

 FastCGI was great for converting existing CGIs (often Perl) and drastically improving performance.

But:

- Native web server APIs were exploited more and more, either for existing scripting languages like Perl or new languages like PHP.
- Apache httpd modules took off. Web developers and deployers became accustomed to native code plug-ins.

# What happened after that?

 Protocol is complex enough that unsanitized input could expose bugs in non-mainstream protocol support in app but also in server

▲ロト ▲帰ト ▲ヨト ▲ヨト - ヨ - の々ぐ

## Concerns for some special situations

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

#### The world of FastCGI

- FastCGI with Apache httpd
- Comparisons between the contenders
- Configuration
- Future

- Protocol is complex enough that unsanitized input could expose bugs in non-mainstream protocol support *in app but also in server*
  - Care needed with TCP to protect access
    - Instant auth: Just set REMOTE\_USER
    - Throw garbage at the TCP port, see what happens
    - AF\_UNIX has filesystem permissions and is system-only.

### Competitors

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

#### The world of FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

- HTTP If you use HTTP you can interoperate with almost anything. But if you use HTTP you have a lot to implement to be able to interoperate with what people will throw at you.
- SCGI http://python.ca/scgi/protocol.txt
  - about 100 lines, so easy to implement yourself if existing library support isn't available or suitable
  - commonly used FastCGI capabilities, plus sendfile
     One unfortunate omission: doesn't provide a way for routing stderr messages (integration into web server logs).

## Competitors

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

#### The world of FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

- CGI why not, if load isn't an issue?
- AJP not just for Java application servers
- custom

These have varying infrastructure to help with process management and protocol.

(And of course mod\_foo and JVM or CLR-based interpreters.)

# FastCGI modules for Apache htttpd

Using FastCGI with Apache HTTP Server

Jeff Trawick

The world c FastCGI

#### FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

Two contenders in this space

- mod\_fastcgi
  - http://www.fastcgi.com/
  - the original
  - often referred to as outdated and unmaintained, though it is still actively used and there was a snapshot created in 2009 (last release was 2.4.6 in 2007)

 supports httpd 1.3–2.2 (and probably needs just a few tweaks to support 2.4-dev)

# FastCGI modules for Apache htttpd

Using FastCGI with Apache HTTP Server

Jeff Trawick

The world o FastCGI

#### FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

### Two contenders in this space

- mod\_fastcgi
  - http://www.fastcgi.com/
  - the original
  - often referred to as outdated and unmaintained, though it is still actively used and there was a snapshot created in 2009 (last release was 2.4.6 in 2007)
  - supports httpd 1.3–2.2 (and probably needs just a few tweaks to support 2.4-dev)
- mod\_fcgid
  - http://httpd.apache.org/mod\_fcgid/
  - originally created by Ryan Pan in 2004 and published under GPL; hosted at SourceForge
  - donated and relicensed to ASF in 2009; now developed and released as a subproject of Apache httpd
  - supports httpd 2.0–2.4-dev

# Proxy scheme modules

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world c FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

Two separately maintained proxy scheme modules:

- mod\_proxy\_fcgi in Apache httpd 2.4-dev covered more later
- mod\_proxy\_fcgi at SourceForge
   Because it is limited to httpd 2.0, it doesn't support load
   balancing.
   not discussed further

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

They support only externally managed servers over TCP/IP.

# Which mod\_fcgid?

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world o FastCGI

### FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

- 2.2 was the only release for a long time, and some important patches accumulated in the source tree, SourceForge bug db, and in private trees.
- Not all of that has made its way to ASF mod\_fcgid.

# Capability differences

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world o FastCGI

#### FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

### $mod_{-}fastcgi has$

- Ioad balancing to FastCGI processes
- statically defined and externally managed FastCGI processes
- support for FastCGI apps which can handle multiple concurrent requests or include their own process management

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

other less-important features

# Capability differences

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world o FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

### $mod_fcgid$ has

- better option configuration for dynamically started FastCGI processes
- monitoring of processes via mod\_status reports
- arguably better configuration of process management parameters

arguably better documentation

neither has X-Sendfile, unlike Lighttpd

# Logging differences

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world of FastCGI

#### FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

- mod\_fastcgi writes a lot of information about process management at LogLevel warn
   2009 snapshot has same bogus error info logged that has been around for a long time
- mod\_fcgid uses LogLevel info for similar information but before 2.3.5 it used LogLevel notice — unsuppressible – for some common messages

# Other possible considerations — Licensing

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world of FastCGI

#### FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

 mod\_fastcgi is not considered a free software license.
 mod\_fastcgi and any derivatives are licensed for the sole purpose of implementing FastCGI specs defined or endorsed by Open Market.

(The Open Market license for FastCGI libraries has no such restriction.)

No issues with ASL 2.0.

# Other possible considerations — Dev processes

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world o FastCGI

#### FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

- mod\_fcgid Code repos, releases, security issues, bug reporting, development discussions, etc. are the same as the server itself.
- mod\_fastcgi Code on a git repo at http://repo.or.cz, not much recent history of releases or security process, bug reporting on the fastcgi.com-hosted mailing list.

# Syscall summary

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world of FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

mod\_fcgid has, mod\_fastcgi doesn't:

setsockopt(TCP\_NODELAY) EOPNOTSUPP

▲ロト ▲帰ト ▲ヨト ▲ヨト - ヨ - の々ぐ

- writev() for 756 bytes with wasted element
- read() EAGAIN
- poll()
- two lock/unlock sequences

# Syscall summary

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world o FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

mod\_fastcgi has, mod\_fcgid doesn't:

stat()

- two more calls to gettimeofday()
- write() for 886 bytes
- select()

bad for platforms with small FD\_SETSIZE and heavily threaded MPM child processes

- fcntl(turn off non-blocking)
- setsockopt(disable linger)

The unexpected socket calls make more sense when using TCP sockets.

# Simple CGI and FastCGI configuration

Using FastCGI with Apache HTTP Server

Jeff Trawick

The world o FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

Start with CGI:

Alias /fastcgi/ \ /home/trawick/ApacheCon/inst/fastcgi/

```
<Location /fastcgi>
Options +ExecCGI
SetHandler cgi-script
</Location>
```

IOW, enable the ExecCGI option and set the handler appropriately. (ScriptAlias kind-of does that) Change the handler name to fcgid-script (mod\_fcgid) or fastcgi-script (mod\_fastcgi).

# More classic CGI configuration

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world o FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

<Location /myapp/> AddHandler prettify txt Action prettify /tools/prettify.pl </Location>

<Directory /www/tools/> Options +ExecCGI SetHandler cgi-script </Directory>

Again, change the handler name to fcgid-script (mod\_fcgid) or fastcgi-script (mod\_fastcgi).

## Wrappers

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world o FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

- a command which will run for certain requests by container or extension
- typically is outside of the web space
- typically is a script which encapsulates command-line parameters and environment settings such as envvars and ulimits

```
<Location /phpapp/>
AddHandler fcgid-script .php
Options +ExecCGI
FcgidWrapper /usr/local/bin/php-wrapper .php
</Location>
```

### Command-specific options

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world o FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

Most directives apply to every app in a certain container (vhost or per-dir).

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

FcgidCmdOptions allows many directives to be applied for a single specific command.

```
FcgidCmdOptions /path/to/info.pl \
   IdleTimeout 30 \
   InitialEnv VHOST=www2.example.com \
   IOTimeout 5 \
   MaxRequestsPerProcess 10000
```

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

 PHP FastCGI processes normally exit after 500 requests Synchronize mod\_fcgid and PHP limits to avoid 500 error<sup>1</sup>.
 In PHP wrapper: PHP\_FCGI\_MAX\_REQUESTS=10000
 In fcgid configuration: FcgidMaxRequestsPerProcess 10000

or just set PHP\_FCGI\_MAX\_REQUESTS to 0 to disable

<sup>1</sup>The HTTP error code and the request count are both 500. Conspiracy?

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world of FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

PHP FastCGI process management ineffective (wasted) with mod\_fcgid, which routes only single concurrent requests to the socket of a process which it has spawned.

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

Leave PHP child process management disabled (PHP\_FCGI\_CHILDREN=0).

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world of FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

PHP FastCGI process management ineffective (wasted) with mod\_fcgid, which routes only single concurrent requests to the socket of a process which it has spawned.

Leave PHP child process management disabled (PHP\_FCGI\_CHILDREN=0).

not an issue with mod\_fastcgi, though there are lingering complaints that PHP process management is problematic anyway

Using FastCGI with Apache HTTP Server

Jeff Trawick

The world o FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

#### But:

 With PHP process management, single cache can be used concurrently by many processes.

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

The world c FastCGI

FastCGI with Apache httpd

Comparisons between the contenders

Configuration

Future

#### But:

- With PHP process management, single cache can be used concurrently by many processes.
- Without PHP child process management, PHP opcode caches are not very effective. Cache is serially reused within single process when the same fcgid-spawned process handles another request.

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

### More oddities

#### Using FastCGI with Apache HTTP Server

Jeff Trawick

- The world c FastCGI
- FastCGI with Apache httpd
- Comparisons between the contenders

Configuration

Future

PHP flags in .htaccess files — no longer respected when you move from mod\_php to FastCGI

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

 on Windows, mod\_php strips the drive letter from SCRIPT\_NAME; mod\_fcgid doesn't
