NRGC

NRG controller with Modbus RTU over RS485

▶ Main features

- **Communication interface.** The NRG controller bridges the field level devices to the control level to allow exchange of data in real-time with the NRG solid state relays.
- **Reduced maintenance costs and downtime.** Use of real-time data for prevention of machine stoppages during operation.
- **Good quality products and low scrap rates.** Real-time monitoring allows timely decisions for better machine and process management.
- **Reduced efforts in troubleshooting.** A number of faults can be distinguished to facilitate and reduce troubleshooting time.
- **Fast installation and set-up.** The solid state relays on the BUS are configured by AutoConfiguration for fast set-up and prevention of incorrect settings.
- **Compact dimensions.** One controller with a product width of 35 mm can handle up to 32 RG..CM..N or 48 RG..D..N NRG solid state relays.

▶ Description

The **NRGC** is the NRG controller in the NRG BUS chain.

The **NRGC** interfaces directly with the main controller of the system through Modbus RTU on an RS485 interface. Each **NRGC** in the system is identified by a unique Modbus address that can be set either manually via a front selector switch that allows only Modbus addresses 1 to 15 or through dedicated registers for addresses 1 to 247. The default Modbus communication settings can also be modified via dedicated registers.

The **NRGC** acts as a master of the respective NRG BUS chain when it is requested by the main controller to carry out actions on the specific NRG BUS chain. Otherwise, the **NRGC** is just a facilitator of the communication between the main controller and each individual **RG..N** solid state relay in the system.

The **NRGC** needs to be supplied with 24 VDC. It is equipped with a configurable digital output that is set as an **NRGC** alarm indication as the default setting. LEDs on the front facade give a visual indication of the status of the NRGC, of any ongoing communication with the main controller (COM) and the RG..Ns on the BUS chain (BUS) and of any alarm condition related specifically to the **NRGC**.

Specifications are noted at 25°C unless otherwise specified.

▶ Applications

Any heating application where reliable and precise maintenance of temperatures is crucial to the quality of the end product. Typical applications include plastic machinery such as injection machines, extrusion machines and PET blow moulding machines, packaging machinery, sterilisation machinery, drying tunnels and semiconductor manufacturing equipment.

▶ Main function

- Communication interface: Modbus over RS485
- Connects up to 48 **RG..D..Ns** or 32 **RG..CM..Ns**
- Selector switch for Modbus addresses 1-15 (Modbus addresses 1-247 through comms)
- Supply voltage 24 VDC +/-20%

The NRG system

11, 12, 14. Applicable only to 'NRGC'
A1+, A2-. Required for RG..D..N or external control mode of RG..CM..N
*RGN-TERMRES

▶ System Overview

The NRG is a system consisting of one or more BUS chains that enable communication between the field devices (such as the solid state relays) and the control devices (such as the machine controller or PLC).

Each **NRG BUS** chain consists of the following 3 components:
- the NRG controller
- the NRG solid state relay(s)
- the NRG internal BUS cables

The **NRG controller** is the interface to the machine controller. It acts as a gateway for the communication between the PLC and the RG..N solid state relays. It is not possible to operate the NRG system without the NRG controller.

The NRG controllers available are:
- **NRGC**
  The NRGC is an NRG controller with a Modbus RTU interface over RS485. The NRGC is addressed via the assigned Modbus ID (from 1-247). In an NRG system operating on Modbus it is possible to have 247 NRG BUS chains.

- **NRGC-PN**
  NRGC-PN is an NRG controller with a PROFINET communication interface. The NRGC-PN is identified by a unique MAC address which is printed on the facade of the product. The GSD file can be downloaded from www.gavazziautomation.com

- **NRGC-EIP**
  NRGC-EIP is an NRG controller with an EtherNet/IP communication interface. The IP address is provided automatically via a DHCP server. The EDS file can be downloaded from www.gavazziautomation.com

► NRG system required components

Description	Component code	Notes
Solid state relays	RG..N	NRG solid state relays
NRG controller	NRGC	• **NRGC:** NRG controller with Modbus RTU communication. • **NRGC-PN:** NRG controller with PROFINET communication. • **NRGC-EIP:** NRG controller with EtherNet/IP communication. 1x RGN-TERMRES is included in the NRGC.. packaging. The RGN-TERMRES is to be mounted on the last RG..N on the bus chain.
NRG internal BUS cables	RCRGN-xxx	Proprietary cables terminated at both ends with a micro USB connector

Structure
Element	Component	Function
Us+ Us-	Supply connection	2 position spring plug - Us+, Us- connection for powering the NRGC
Push button	Communications check button	Enables and disables a Communications Check function of the BUS chain (link between NRGC and RG..Ns) by pressing front button between 2 to 5 seconds
Hex Switch	NRGC ID hex switch	Sets ID 1 to 15 of the NRGC through a hex switch located behind a door flap that can be opened by a flat screwdriver. Default shipping position = 0 (i.e., internal NRGC ID = 1)
EMR output	Auxiliary Electromechanical relay	3 position electromechanical relay (11, 12, 14) that can function as an Alarm EMR or a general purpose EMR Default shipped function = Alarm EMR
Green LED	ON indicator	Indicates presence of Supply voltage on NRGC
Yellow LED	BUS indicator	Indicates ongoing communication with RG..Ns
Yellow LED	COM indicator	Indicates ongoing communication with main controller
Red LED	ALARM indicator	Indicates presence of an Alarm condition
RS485 ports	RS485 internal communication ports	2x RJ45 (loopable) plugs for RS485 communications line
Micro USB	Micro-USB port – internal BUS	RCRGN cable connection for the internal BUS communications line

Features

![red arrow icon] **General data**

Material	Noryl (UL94 V0), RAL7035
Mounting	DIN rail
Dimensions	2-DIN
Touch protection	IP20, IP00 with door flap on front facade open
Weight	135 g
Compatibility	NRGC RGC1A60D…N solid state contactors (RG end-devices) RGS1A60D...N solid state relays (RG end-devices)

![red arrow icon] **Dimensions**
All dimensions in mm.
Tolerances +/- 0.5 mm.
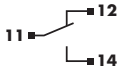

Performance

![red arrow icon] **Power supply specifications**

Supply port rating, Us	24 VDC
Supply voltage range, Us	19.2 – 32 VDC*
Reverse polarity protection	Yes
Consumption	< 12 W
LED Indication, Supply ON	Green LED
Power on, Power off delay	<500 ms. No messages are accepted during this time

* to be supplied by class 2 power source according to UL1310

▶ **Auxiliary relay specifications**

Function	Alarm EMR (default setting): operates in case of an Alarm condition present on the NRGC or General Purpose EMR: operation controlled through ModBus This is configurable via the Relay Configuration Register - refer to NRG User Manual for further details
Output type	EMR, 1 Form C Normally closed (11-12) Normally open (11-14)
Contact rating	2A @ 250 VAC/30 VDC
Isolation	11, 12, 14 to Us: 1.5k VAC

▶ **RS485**

Communication protocol to Main Controller	ModBus RTU
Type	2-wire, half duplex
NRGC typology	- ModBus slave using standard Modbus function codes - Byte repeater when main controller addresses RG..Ns directly through the use of a special function code
Baud rate	Default: 115200 bits/s Selectable via ModBus: 9600, 19200, 38400, 57600 and 115200 bits/s
Data Format	Data bits: 8 Parity: Even (Default) Stop bit: 1 Selectable via ModBus: Even, Odd, No parity
Address	Default: 1 (Hex switch position 0) Selectable: 1 to 15 via hex switch Selectable: 1 to 247 via Modbus (with Hex switch position set to 0)
Max. number of NRGCs in the system	247
Connection to main controller	2x shielded RJ45 plugs; 1 plug for interfacing to PLC / main controller 1 plug for looping to another NRGC
LED indication - COM	Yellow, ON indicating ongoing communication with the main controller

▶ **Internal Bus**

Max. number of RG..Ns connected to NRGC	48x RG..D..N 32x RG..CM..N
Connection to RG..Ns	RCRGN-xx 5-way cable terminated with micro-USB connection
BUS termination	RGN-TERMRES (1x pc. provided with 1x NRGC) to be plugged on the last RG..N on the BUS chain to terminate the internal BUS
LED indication - BUS	Yellow, ON indicating ongoing communication with the RG end-devices

ON	Green	ON:	Us is present at terminals Us+, Us-
		OFF:	Us is not present at terminals Us+, Us-
BUS	Yellow	ON:	During transmission of messages from NRGC to RG..Ns
		OFF:	Idle bus between the NRGC and RG..Ns and when NRGC is receiving data from RG..Ns
COM	Yellow	ON:	During transmission of a reply from the NRGC to the main controller
		OFF:	Idle bus between the main controller and NRGC and when NRGC is receiving data from the main controller
ALARM	Red	ON:	Flashing when alarm condition is present. Refer to Alarm management section
		OFF:	No alarm condition

CARLO GAVAZZI

Alarm management

| Alarm condition present	• Red LED ON with a specific flashing rate
	• Any of the error flags in NRGC status register (**CTRSR**) is set
	• Auxiliary relay operates if:
	  - It is set as an Alarm relay (shipped default operation)
	  - Respective alarm bit is not masked in the Relay Configuration Register (**RLYCR**). Refer to NRG user manual for further details	

Alarm types	**No. of flashes**	**Description of fault**

	2	Configuration Error:
		The number of RG..Ns connected to the bus chain is not correct
		  - The number of RG..Ns on the bus chain is >48 for RG..D..N or >32 for RG..CM..N (Device Limit Error)
		  - The number of RG..Ns on bus chain is not as expected (Device Mismatch Error). This alarm is not generated automatically but can be optionally set by the user

	3	Communication Error (COM): An error in the communication link (RS485) between the main controller and the NRGC
	8	Communication Error (BUS): An error in the communication link (internal BUS) between the NRGC and RG..Ns
	9	Internal Error: Supply out of range or detection of abnormal conditions
	10	Termination (BUS) Error: Internal BUS chain not terminated
Flashing rate	0.5s 3s

NRG internal BUS cable

Main features

- Cables available at various lengths to provide the internal BUS of the NRG system
- Cables terminated at both ends with a microUSB plug
- Connects the NRGC to the RG..N solid state relay and respective RG..N solid state relays

Description

The **RCRGN** cables are proprietary cables that must be used with the NRG system for the internal BUS. These cables connect the NRG controller to the RG..N solid state relays and respective RG..N solid state relays.

The RCRGN... are 5-way cables carrying the communication, supply and autocofiguration lines. By means of autoconfiguration, the RG..Ns are assigned a unique ID based on the physical location and hence internal BUS wiring sequence when an autoconfiguration command is sent to the RG..Ns.
